

# Apollo

**Básico**

**Criando um mini-browser  
em 3 minutos.**

## <!-- MeuBrowser.mxml -->

```
<?xml version="1.0" encoding="utf-8"?>
<mx:ApolloApplication xmlns:mx="http://www.adobe.com/2006/mxml"
layout="absolute" backgroundGradientColors="#c0c0c0, #ffffff"
width="1024" height="700" title="Meu Browser">
  <mx:Script>
    <![CDATA[
      import mx.controls.Alert;

      private function ativaUrl():void{
        if(_text_url.text!=""){
          _html_browser.location=_text_url.text;
        }else{
          Alert.show("É preciso digitar corretamente a URL");
        }
      }
    ]]>
  </mx:Script>

  <mx:ApplicationControlBar x="0" y="0" width="100%">
    <mx:Label text="URL:" fontWeight="bold" color="#ffffff"/>
    <mx:TextInput width="531" id="_text_url"/>
    <mx:Button label="Ir" click="ativaUrl();"/>
  </mx:ApplicationControlBar>

  <mx:HTML left="7.5" top="41" right="7.5"
    id="_html_browser" borderStyle="outset" bottom="10"/>
</mx:ApolloApplication>
```
